Access control systems

We supply and install new access control systems that can be interfaced into existing systems, such as keypad and fob entry systems.

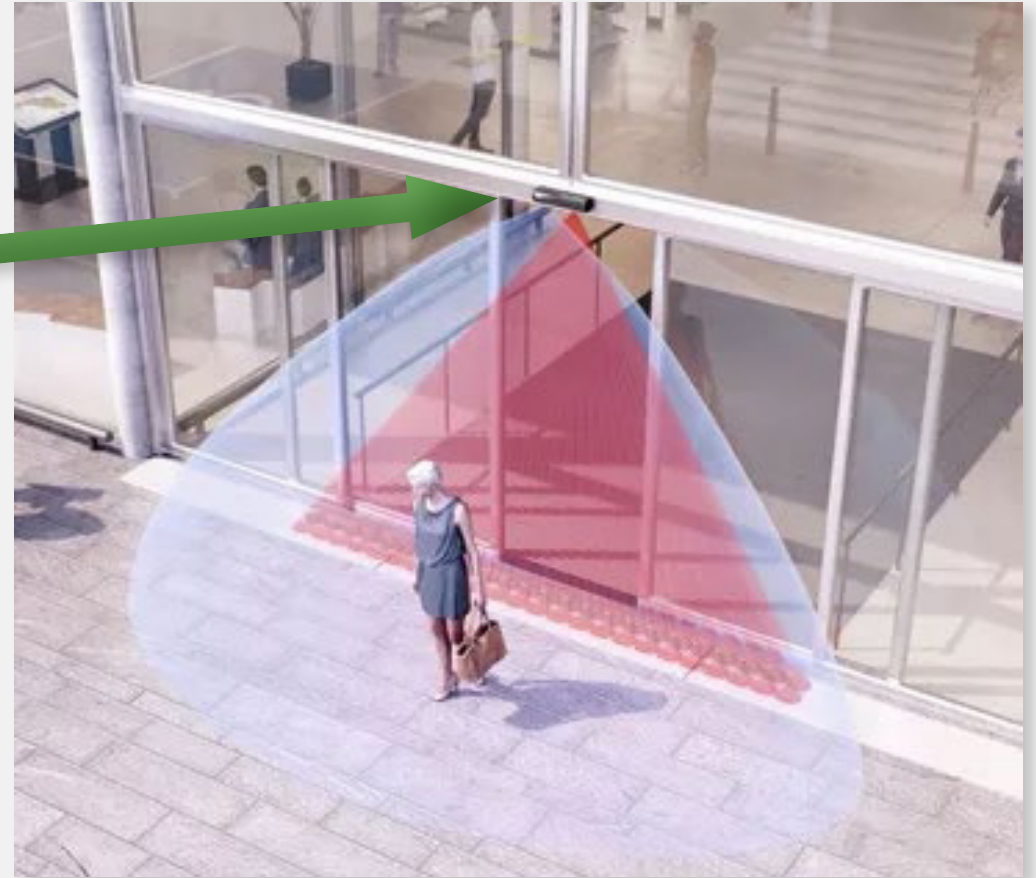

Overhead safety sensors

Overhead safety sensors, reduce the risk of impact and crushing within the threshold area to detect slow moving or stationary objects.

automatic door access

Pocket Doors

Pocket doors are fitted in the opening side of the door to eliminate the risks of crushing or impact to a person within this area.

The door leaf slides between them and the outer screen automatic sliding doors.

Pocket doors are fitted on hinges so they can be opened for cleaning and maintenance.

They are secured with locks when closed and colour matched to doors and frames.

Automatic Sliding Door Installation

A polyester finish is baked onto the aluminium profiles to create a high quality, robust and durable finish, which can withstand all the rigours of UK weather conditions.

Each bespoke RAL colour option is available in a gloss or matt finish. There are 213 colours available as every door system is bespoke in size and colour.

After Care Support

BH Doors provide service and maintenance to ensure the continued operation and compliance of your installation.

We have a specific schedule of works for servicing which includes inspection and minor repairs.

Our checklists form part of the current legislation and provide you with documentation per door for your records.

We also provide service contract agreements on all manufacturers equipment regardless of who it was installed by.
